

LEARNLI

Choose depth over drill.

LearnLi is not just an app you open. It is a setting you study in — a companion for every chapter, every doubt, every test.

Everything a chapter needs, before the exam asks for it.

- Guided lessons with Li, chapter by chapter
- Listen mode for reading aloud, voice mode for talking back
- Prerequisites called out so gaps are closed early
- Pronunciation lab for subject keywords and IPA
- Quizzes, custom tests, and image-based questions
- Levels and points that make progress visible
- Ask Li to explain any concept, in text or voice
- Simple overviews before a student dives in
- Industry insights that connect a chapter to real work
- Visual and interactive learning for harder ideas
- Study plans fitted to time of day and duration
- Dashboards for students, parents, and teachers

GUIDED TUTOR

Learn with Li

A structured lesson through the active chapter. Li walks the student through ideas in order, the way a patient teacher would, without rushing the room.

INSTANT DOUBTS

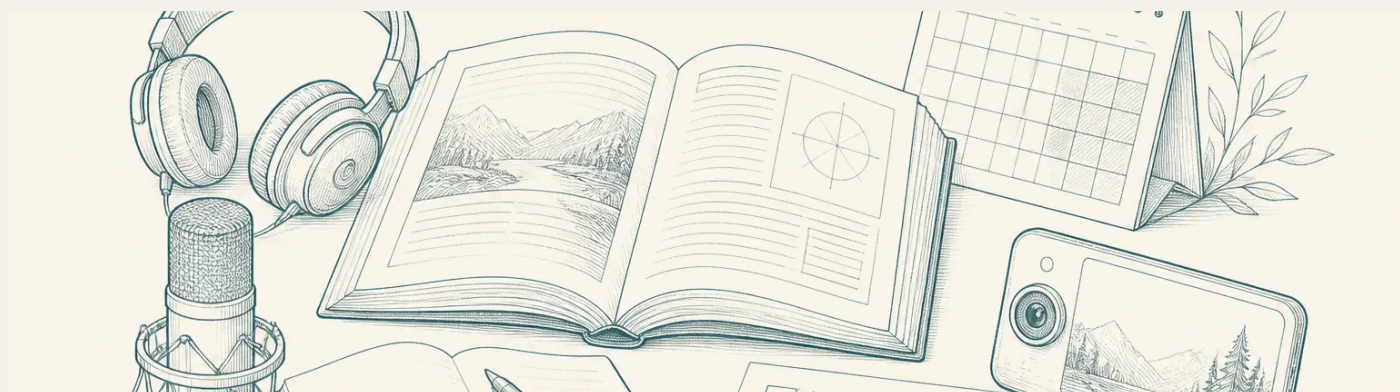

Ask Li

A student can ask follow-up questions, tap a keyword, or upload an image from the textbook. Li answers in the context of that chapter — not the whole internet.

INTERACTIVE CONCEPTS

Visual learning

Diagrams, models, and interactive views for the ideas that do not sit still on a page. Built for Science, Mathematics, and the chapters that need to be seen.

Smart sections

01

Simple overview

A short, ordered outline of the chapter so the student knows the shape of the work before the first paragraph.

03

Industry insights

Where this chapter lives outside the exam: labs, clinics, workshops, civic work, and the careers that use it.

05

Take a quiz

A conceptual mock of the chapter. Check understanding before the school test, not after.

Create your own test

Pick a subject, choose chapters, set duration and question mix — MCQ, fill in the blanks, one-word answers — then schedule it.

Study plans

Choose daily time, duration, and a preferred window — morning, afternoon, evening, or night. LearnLi builds a plan a student can actually keep.

02

Pre-requisites

The ideas that must already be in place. Review them here instead of discovering the gap halfway through a quiz.

04

Pronunciation lab

Hear and practise the keywords of the chapter, with IPA support, so technical language becomes speakable.

06

Li scoring partner

Li reads the attempt, names the gaps, and points the student back to the exact idea that still needs work.

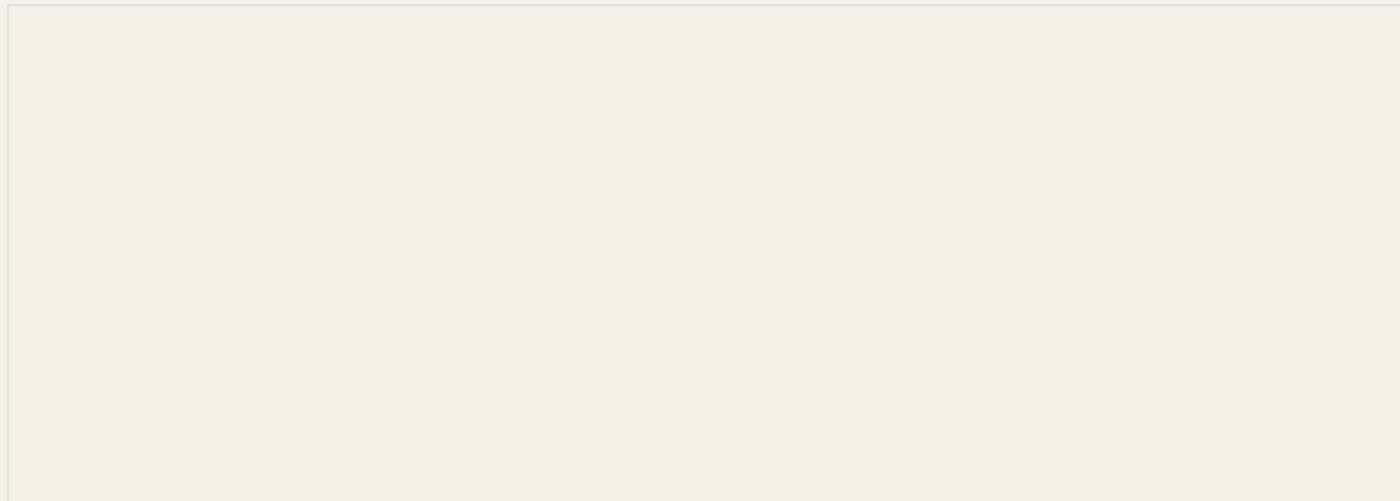

Image-led questions

Upload a page, a diagram, or a homework photo. Li turns it into practice, so the textbook in hand can become the test on screen.

Levels and points

Streaks, badges, and a level path from Beginner onward. Progress is counted in work done, not in hours stared at a screen.

Three dashboards. One story of progress.

Student dashboard

Active chapter, learning modes, quizzes, goals, career paths, and a record of what has been finished. The student always knows the next honest step.

Parent dashboard

A clear view of time spent, scores, streaks, and upcoming tests — enough to stay close without sitting over the homework.

Teacher dashboard

Class-level visibility for the adults who already hold the room. See who is moving, who is stuck, and which chapters need another pass.

THE COMPANY

Help every student in Grades 6–12 understand the chapter in front of them, practise it properly, and show that progress to the people who care.

THE PRODUCT

An AI-assisted learning platform aligned to CBSE. Li teaches, answers, listens, speaks, quizzes, and plans. Students work chapter by chapter. Parents and teachers see the same story from their own dashboards.
